

ALUMIL's sliding thermal insulating system SUPREME S650 is the ideal solution for projects requiring wide spans with minimal aluminium site lines. Massive yet elegant glazing surfaces are achieved while maintaining high functionality, performances and minimal architectural design.

The system's main advantage is the improvement of living conditions by maximizing the natural lighting and minimizing the visible aluminum face width, which makes the residents feel closer to the external environment and increases their sense of freedom.

- All the aluminum profiles are totally concealed in wall maximizing natural lighting in the buildings.
- Only 25 mm visible aluminium face width at the interlocking profile.
- Extra concealed profiles available for water drainage.
- Stainless steel rollers for smooth sliding & maximum functionality with high resistance to corrosion.

- For all parallel sliding typologies including the corner constructions.
- Special profiles for the implementation of multi-sash typologies.
- Alternative version for top-mounted installation.
